

SINGLE LINE RESISTANCE LUBRICATION SYSTEM - OIL ONLY

These systems use manual or automatic pumps to dispense oil to the lube points through resistance type meter units, commonly known as “restrictors”. The oil dosage to these lube points is proportional to the pump pressure and oil viscosity. They are economical in price and easy to instal. The automatic pumps are available with or without integral timers.

APPLICATIONS FOR THIS SYSTEM

- 💧 Lubrication of bearings, slideways, drivescrews on machine tools.
- 💧 Packaging machinery.
- 💧 Printing machinery including presses, binders and guillotines.
- 💧 Stamping presses.
- 💧 Sheet metal machinery.
- 💧 Chain lubrication.
- 💧 Any production machinery.
